*RRA Architects*

Our national focus is distinct. Imagination, contemporary vision, creativity, a sense of history and realism are all qualities we nurture. This is a culture that RRA Architects has encouraged and built upon; allowing our architects to take ownership of their design whilst fully realising their aspirations and the potential of any project opportunity. RRA architects bring three essential qualities: imagination, value for money and freedom from worry.

We embrace a range of specialists working as an integrated design team with planners, eco designers, urban designers, quantity surveyors, master-planners, architects, conservation architects, project managers and interior designers. Consequently we can offer a specific specialist service or a fully integrated design service as appropriate.

Our portfolio includes, sustainable housing, residential projects, retail / commercial mixed-use developments, conservation and heritage schemes, public urban space / landscaping, community projects and urban regeneration. Our capabilities include satisfying the detailed requirements of owner-occupiers, creating maximum flexibility, sensitivity to a particular site, community consultation, partnership working and speedy and competent delivery.

We have the confidence to innovate, the know-how to consistently deliver and a positive attitude that ensures we create original solutions to real problems not a re-appropriation of fixed ideas. Experience of a wide variety of building types has taught us that knowledge built up in one sector is often useful within another. Our mission is to combine vision with action to make a positive difference - creatively, commercially, consistently.
